HTML LINKS

HTML LINKS – HYPERLINKS

- HTML links are hyperlinks.
- You can click on a link and jump to another document.
- When you move the mouse over a link, the mouse arrow will turn into a little hand.

Note: A link does not have to be text. A link can be an image or any other HTML element!

HTML LINKS – SYNTAX

The HTML `<a>` tag defines a hyperlink. It has the following syntax:

```
<a href="url">link text</a>
```

The `<a>` element's key attribute is `href`, which specifies the destination, while the visible link text is what users click to navigate to the given URL.

```
<a href="https://www.w3schools.com/">Visit  
W3Schools.com!</a>
```

HTML LINKS – THE TARGET ATTRIBUTE

The target attribute can have one of the following values:

- `_self` – Default. Opens the document in the same window/tab as it was clicked
- `_blank` – Opens the document in a new window or tab
- `_parent` – Opens the document in the parent frame
- `_top` – Opens the document in the full body of the window

Use `target="_blank"` to open the linked document in a new browser window or tab:

```
<a href="https://www.w3schools.com/"  
target="_blank">Visit W3Schools!</a>
```

LINK TITLES

The title attribute specifies extra information about an element. The information is most often shown as a tooltip text when the mouse moves over the element.

```
<a href="https://www.w3schools.com/html/"  
title="Go to W3Schools HTML section">Visit our  
HTML Tutorial</a>
```
