HTML ID

ELEMENT IS USED AS A CONTAINER FOR OTHER HTML ELEMENTS.

HTML ID

- Each id must be used only once in a document
- Used in CSS to apply specific styles
- Used in JavaScript to access and modify elements
- CSS syntax: `#idName { }`
- Example: `<h1>` can use `id="myHeader"` to apply styles from `#myHeader`
- id must have at least one character, cannot start with a number, and must not contain spaces

```
<h1 id="myHeader">My Header</h1>
```

DIFFERENCE BETWEEN CLASS AND ID

- A class name can be used by multiple HTML elements, while an id name must only be used by one HTML element within the page

```
<!-- An element with a unique id -->  
<h1 id="myHeader">My Cities</h1>
```

```
<!-- Multiple elements with same class -->  
<h2 class="city">London</h2>  
<p>London is the capital of England.</p>
```

```
<h2 class="city">Paris</h2>  
<p>Paris is the capital of France.</p>
```
