MODULE 3: TEXT AND FORMATTING

HTML HEADINGS

ORGANIZING CONTENT WITH TITLES

HEADING TAGS

`<h1>Heading 1</h1>` (largest, most important)

`<h2>Heading 2</h2>`

`<h3>Heading 3</h3>`

`<h4>Heading 4</h4>`

`<h5>Heading 5</h5>`

`<h6>Heading 6</h6>` (smallest)

HEADINGS ARE IMPORTANT!

Search engines use headings to index page structure

- ✓ DO: Use headings to show document hierarchy
- ✗ DON'T: Use headings just to make text big/bold

Rule:

- `<h1>` for main title (ONCE per page)
- `<h2>` for major sections
- `<h3>` for sub-sections

CUSTOM HEADING SIZE

```
<h1 style="font-size:60px;">Extra Large  
Heading</h1>
```

Use CSS to change heading size
Default sizes can be overridden
